

NSX-V to NSX-T Migration Workshop

This engagement helps VMware customers currently running NSX-V to migrate to NSX-T. VMware has announced that NSX-V will be maintained for a while, but all development efforts go towards NSX-T, which requires customers of NSX-V to transition to NSX-T.

Why/Outcome

Customers who have already implemented NSX-V will quickly realize that the transition is not easy and requires a detailed review as depending on service usage manual service migration is required.

What

While the move from NSX-V to NSX-T might look challenging, our architects and senior consultants will help you analyse your existing deployment and help create a migration strategy to enable you to be successful in this transition.

We will also identify a possible timeline and – if you want – we will engage our professional services team to run the migration for you.

Products aligned with this offering

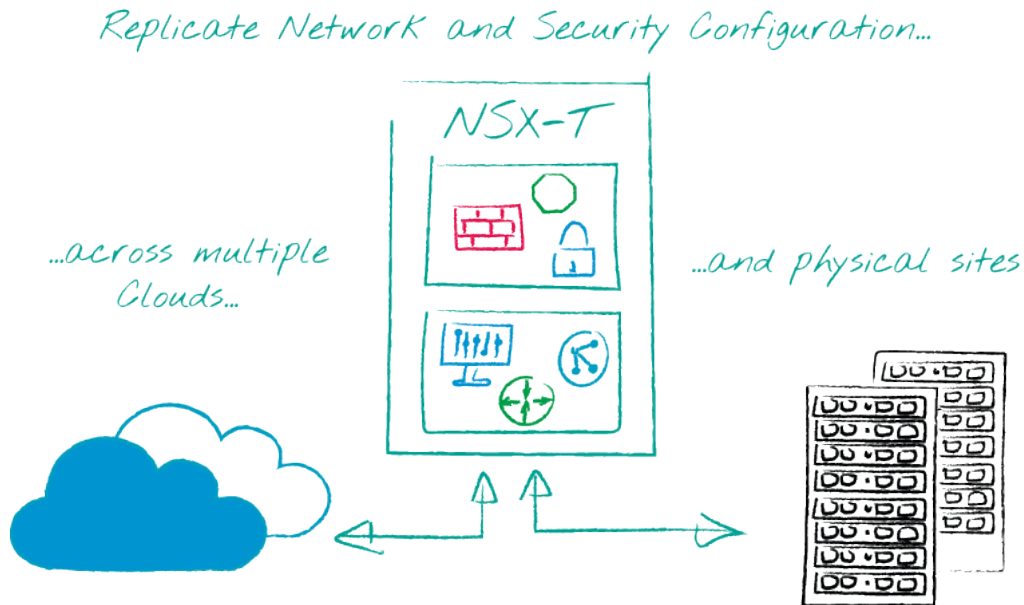

- VMware vSphere
- VMware NSX-T
- VMware NSX-V

High level project timeline

- 1-2 weeks

High level services provided

- Analysis of the current NSX-V deployment.
- Migration strategy development.
- Explain additional opportunities/use cases after migrating to NSX-T
- Executable migration timeline.

This engagement includes several onsite or remote (based on your requirements) workshops to cover assessment of your existing deployment and to develop a migration/transition strategy to move from NSX-V to NSX-T. It analyzes your existing deployment and also identifies how to maybe adjust your current infrastructure to make the transition easier. An executable upgrade/migration plan will be the key outcome of this engagement.

Project timeline

After an initial kick-off workshop, which will ensure everybody is aligned on goals, priorities and limits of the engagement, we will run an assessment workshop to understand your existing NSX-V deployment and identify any potential gap between existing documentation and actual implementation. We will then analyze impact of an NSX-V to NSX-T migration and prepare an upgrade/migration plan. If requested we also provide information on how this could be operated by our professional services team. In the Closing workshop the migration plan will be presented and discussed.

Additional options provided

- 3rd party integration upgrades (Security, Network, Automation)
